Inside LightWave 8 (ISBN 0-7357-1368-5)

Q:

I opened the file Faucet.lws like it asked but then it could not find "plug-in of type MasterHandler found with name FPrime." I looked all over the CD and my computer and could not find the FPrime, I searched the web and it seems you have to buy it. Do I have to buy this plug-in to be able to do this exercise?

A:

All they need to do is just tell LightWave "No" when it asks to find the plug-in. This will happen many times, so they'll need to tell the program "No" more than once. Quite a few times on some scenes. You see, FPrime attaches itself to all of the scenes surfaces. Once loaded, just resave the scene and objects to the hard drive and all will be well.
